

ABSTRACT OF THE DISCLOSURE

A method provides a traveler access to a repository over an information network by means of an access point apparatus located at a transit terminal. The traveler can download information content hosted on the repository for off-line viewing. The downloaded information content is stored on a mobile storage medium. The storage medium is given to the traveler and may be used later by the traveler to access the data, when traveling for example. The information content may also be downloaded onto a storage medium being an onboard component of a means of transportation. The traveler accesses the information network using a device provided at an assigned traveling location.
